

OVERSLEEVES

Disposable oversleeves are used to protect the arms/sleeves without having to wear full garments. Oversleeves are widely used in laboratory, pharmaceutical, food processing, forensic science and medical environments.

Healthcare and Medical Settings:

In hospitals, clinics, and healthcare facilities, disposable oversleeves are often worn by healthcare workers and visitors to prevent the spread of germs, contaminants, and bodily fluids. They provide an extra layer of protection for arms and clothing.

Food Service and Hospitality:

In restaurants, cafeterias, and food processing facilities, disposable oversleeves are used by food handlers and kitchen staff to prevent the spread of contaminants and maintain hygiene standards. They help protect the arms and clothing from contact with food.

Cleanrooms & laboratories:

In industries such as pharmaceuticals, electronics manufacturing, and research laboratories, where maintaining a controlled and sterile atmosphere is important, disposable oversleeves are worn by personnel to prevent the introduction of particles and contaminants into clean areas.
