

PP COVERALLS

DTS Protect™ PP coveralls are protective clothing garments made from polypropylene fabric.

Polypropylene is a synthetic thermoplastic polymer that is lightweight, durable, and resistant to moisture. PP coveralls are commonly used in various industries and settings to provide protection against contaminants, dirt, and potential hazards.

Industrial & construction:
PP coveralls are used in industrial settings to provide additional protection against dirt, dust, and chemicals.

Food Processing:
In food processing and preparation areas, PP coveralls help maintain hygiene standards by preventing the spread of contaminants from clothing.

Cleanrooms:
In cleanroom environments, such as pharmaceutical manufacturing or electronics production, PP coveralls are worn to prevent the introduction of particles and contaminants.

Healthcare:
PP coveralls can be used in healthcare settings for tasks that require minimal barrier protection.
