

# SURGICAL MASKS

Disposable surgical masks provides non-sterile protection from transfer of microorganism, body fluids and particulate material. They act as a barrier against respiratory droplets and aerosols, reducing the risk of the spread of infectious agents.

DTS Protect™ Type IIR masks are used primarily in healthcare and medical settings, but also used in food production sector, cleanrooms, laboratories, and provide protection against the transmission of infectious agents, including bacteria and viruses.

## Healthcare and Medical Settings:

Disposable Type IIR masks are commonly worn by healthcare professionals, including doctors, nurses, and support staff, in hospital settings. They are used during medical procedures, surgeries, patient care, and other situations where there is a risk of exposure to bodily fluids or respiratory secretions.

## Food Service and Hospitality:

Workers involved in food handling, preparation, cooking, and packaging wear disposable masks to prevent respiratory droplets, hair, or particles from contaminating the food products. This is especially important to ensure food safety and hygiene.

## Cleanrooms & laboratories:

In research labs and facilities where working with biological samples or potentially infectious materials is common, disposable Type IIR masks can provide an additional layer of protection.
